MODUL 2

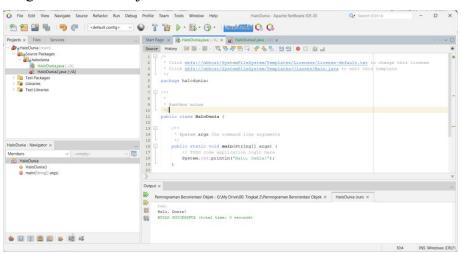

PEMROGRAMAN BERIORIENTASI OBJEK

A. Unduh dan Install IDE Netbeans

B. Pemrograman Java di Netbeans

1. Program HaloDunia.java

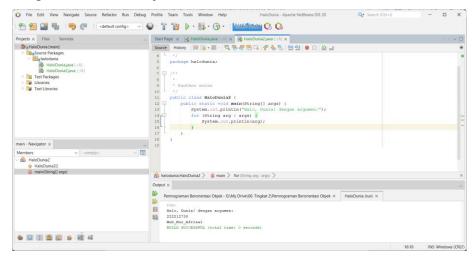

Source code: https://pastebin.com/eVDYSMQL

Kelas / No : 2KS1 / 25

2. Program HaloDunia2.java

Source code: https://pastebin.com/zrmB49ND

C. Objek vs Class

1. Objek dan Kelas Contoh: Inisialisasi melalui referensi

```
*
 * @author muham
public class MahasiswaMain2 {
    public static void main(String[] args) {
        Mahasiswa2 s1 = new Mahasiswa2();
        s1.nim = 123456;
        s1.nama = "Lutfi";
        System.out.println(s1.nim);
        System.out.println(s1.nama);
public class MahasiswaMain3 {
    public static void main(String[] args) {
        Mahasiswa2 s1 = new Mahasiswa2();
        Mahasiswa2 s2 = new Mahasiswa2();
        s1.nim = 123456;
        s1.nama = "Lutfi";
        s2.nim = 123457;
        s2.nama = "Rahma";
        System.out.println(s1.nim + " " + s1.nama);
        System.out.println(s2.nim + " " + s2.nama);
```

NIM : 222212738

Kelas / No : 2KS1 / 25

2. Objek dan Kelas Contoh: Inisialisasi melalui method

```
public class Mahasiswa3 {
     int nim;
     String nama;
     void tambahData(int vnim, String vnama) {
          nim = vnim;
         nama = vnama;
     void tampilkanInfo() {
         System.out.println(nim + " " + nama);
public class MahasiswaMain4 {
    public static void main(String[] args) {
       Mahasiswa3 s1 = new Mahasiswa3();
       Mahasiswa3 s2 = new Mahasiswa3();
        s1.tambahData(123456, "Lutfi");
        s2.tambahData(123457, "Rahma");
       s1.tampilkanInfo();
        s2.tampilkanInfo();
```

3. Objek dan Kelas: Inisialisasi melalui konstruktor

```
public class Mahasiswa4 {
   int nim;
   String nama;

Mahasiswa4(int vnim, String vnama) {
      nim = vnim;
      nama = vnama;
   }

void tampilkanInfo() {
      System.out.println(nim + " " + nama);
   }
}
```

NIM : 222212738

Kelas / No : 2KS1 / 25

```
public class MahasiswaMain5 {
   public static void main(String[] args) {
        Mahasiswa4 s1 = new Mahasiswa4(123456, "Lutfi");
        Mahasiswa4 s2 = new Mahasiswa4(123457, "Rahma");
        s1.tampilkanInfo();
        s2.tampilkanInfo();
   }
}
```
